

## Silver-Line SL-8, SL8V2 Online Operator's Manual

### **Read This Book**

This book has important information for the use and safe operation of this machine. Failure to read this book prior to operating or attempting any service or maintenance procedure for your Silver-Line machine could result in injury to you or to other personnel; damage to the machine or to other property could occur as well. You must have training in the operation of this machine before using it. If you or your operator(s) cannot read English, have this manual explained fully before attempting to operate this machine.

All directions given in this book are seen from operator's position at the rear of the machine.

**Essex Silver-Line Corporation, 1118 Lakeview Ave. PO Box 40, Dracut, MA 01826**

**(Revised 11/07)**

## ***The Silver-Line SL-8, SL8V2 Floor Sander*** **(Suggestions for Care & Operation...Parts List)**

### **Introducing:**

Your new Silver-Line SL-8 floor sander is engineered with both the user and dealer in mind. To the renter the SL-8 offers ease of handling, quiet, dust-free sanding and results that look professional. For the dealer the SL-8 offers years of easy, low cost maintenance.

### **Inspect:**

Check the shipping cartons for any signs of damage and inspect the machine and its parts for any possible damage. *Please note that the handle and dust tube sockets are in good working order. They have been inspected and there are no cracks at the time of shipping. Please take care when assembling so as to not break these pieces when installing their perspective parts.*

### **Assemble:**

Assemble the machine by inserting the dust tube and the handle/switch tube assemblies in their respective sockets and tighten the retaining screws. **Do not over tighten and cause breakage!** Put the dust tube elbow on the dust tube and tie the dust bag on the elbow. When you install the switch handle assembly make sure the switch is facing up.

### **Voltage:**

Use this sander only on house current, (never use 220 volt). The SL-8 uses 14 amps while operating. When additional extension cords are required use only 12/3 heavy -duty cord. Be sure that the machine is switched OFF and is resting on the back of the chassis before plugging it into the proper current.

### **Dust Collecting:**

The dust collection system will be most efficient when the bag is emptied when it is 1/3 to 1/2 full. Remember to remove all sawdust from the house.

### **Sanding Drum:**

The sanding drum that is installed on your new SL-8 has been dynamically balanced and leveled in our factory to assure an even 8" cut. See directions inside to install paper.

### **Wiring:**

Please check the wiring and cords before using or renting this machine

### **Questions:**

Please call us @ 1 800 451-5560 or email our website [www.essex-silver-line.com](http://www.essex-silver-line.com) if we can answer any questions.

### **Warranty:**

Please fill out the enclosed warranty card, tear at the perforation and mail the proper section to our Dracut, MA plant.

## Silver-Line SL-8 Floor Sander

Turn off the sander & unplug from outlet

Bend the Silver-Line SL-8 sheet in the paper bender located on the drum cover (pictured)

Tilt the SL-8 back onto the handle and lift the drum cover for easy installation

Roll the drum until the paper slot is facing you and adjust the cams so the arrows printed on the cams are facing you. The left arrow should point down, while the right arrow points up.

Insert one end of the paper into the slot (pictured) and turn the drum around so that the paper wraps around the drum. Insert the other end into the slot and push both ends into the slot until the paper is snug on the drum.

*When using 20 grit or coarser paper, insert the top of the sheet first and then install the bottom half, it will insert easier.*

Using a 7/16" open wrench turn the left cam down ¼ turn, then turn the right cam up ¼ turn (pictured). As you turn the second cam you will see the paper pull tight into the drum. **You must turn both cams a full ¼ turn to secure the paper.**

Turning the cams more than the ¼ turn will not make the paper any tighter on the drum, ¼ turn on each cam is all you need to attach the sheet. Turning the cams too much can cause the cams to come completely around and loosen the paper.

Lower the drum cover and return the sander to its upright position resting on the rear of the chassis.

Plug the machine into an outlet, turn it on and slowly lower the drum to the surface being sanded as you walk forward. Lift the drum off the floor as you reach the end of the room, walk backwards on the same path and lower the drum to sand the floor as you return to the other end of the room. *Sand in both directions with the Silver-Line SL-8 floor sander!*

To remove used paper, reverse the process.

For very coarse paper, (12 & 16 grit) it may be necessary to remove grit to insert the paper into the slot. First, bend the paper as instructed. Second, put on safety glasses and remove the grit by placing the paper on a hard surface (grit up) and hammering the grit off the flaps until manageable. Continue installation of the paper.

## Installation of Hook & Loop Sandpaper on the Silver-Line SL-8V2 Floor Sander *No Tools Required!*

Turn off the sander & unplug from outlet

Tilt the SL-8V2 back onto the handle and lift the drum cover for easy installation

Roll the drum around until you locate the metal paper installation slot.

Holding the paper with the grit side out (hook towards the drum), insert the leading edge into the slot. Slide the paper side to side in the slot to ensure it is bottomed out. For proper alignment, the edge of the paper must make contact with the bottom of the slot across the full eight inches (8").

Roll the drum towards the floor and press the paper to the drum, attaching the hook and loop.

Pressing the firmly to the drum.

Press along the whole length of paper, making certain the paper goes on the drum evenly.

The back edge of the paper should end at the metal slot.

Lower the drum cover and return the sander to its upright position resting on the rear of the chassis.

Plug the machine into an outlet, turn it on and slowly lower the drum to the surface being sanded as you walk forward. Lift the drum off the floor as you reach the end of the room, walk backwards on the same path and lower the drum to sand the floor as you return to the other end of the room.

*Sand in both directions with the Silver-Line SL-8V2 floor sander!*

To remove used paper, pull straight off from edge.

**What to check on your  
Silver-Line SL-8 Floor Sander  
To keep it running like new!**

**The Drum:** The soft resilient rubber drum of the SL-8 is a wear item that should be checked to ensure your customers the best sanding action. There are several ways to check a drum to see if it is in good shape.

- a. The easiest way would be to see how the paper fits on the drum. It should fit tightly over the drum, square on the sides.
- b. Check the cut on the floor. The drum should make a straight 8" cut, not heavier on either side. If it does not give the correct cut, adjust the wheels to allow the proper cutting action. If the drum is coned shape, replace the drum.
- c. Finally, measure the drum with our measuring string. Wrap the string around the drum, insert it through the loop, pull snug and see if the loop ends up in the red mark. If it does, too much rubber has worn off the drum and it needs replacing.
- d. If the circumference of the drum is 17 1/4" or less, replace it.

**The Dust Pan:** The dustpan (#65) wears on the front edge and ears from the loose abrasives being vacuumed up. If your dustpan is not attached to the pins, reattach it. If it is too worn, replace it with a new one. Your SL-8 has the best vacuum system available to the rental market, but a good dustpan is very necessary for proper functioning.

**The Wheels:** Look at both wheels when you check the drum. If the wheels get out of round the machine will not cut properly. Replace the wheels on your machine.

**The Belts:** Check the belt tension on your SL-8, both belts should be tight, if not adjust them using the motor adjusting screw (#88) located on the front of the motor.

**The Dust Bag:** It may not seem like a big deal, but your dust bag is important. A bag that is too old or repaired too many times will not collect the dust properly. An worn bag can also give the wrong impression to your customers about how you keep up your equipment.

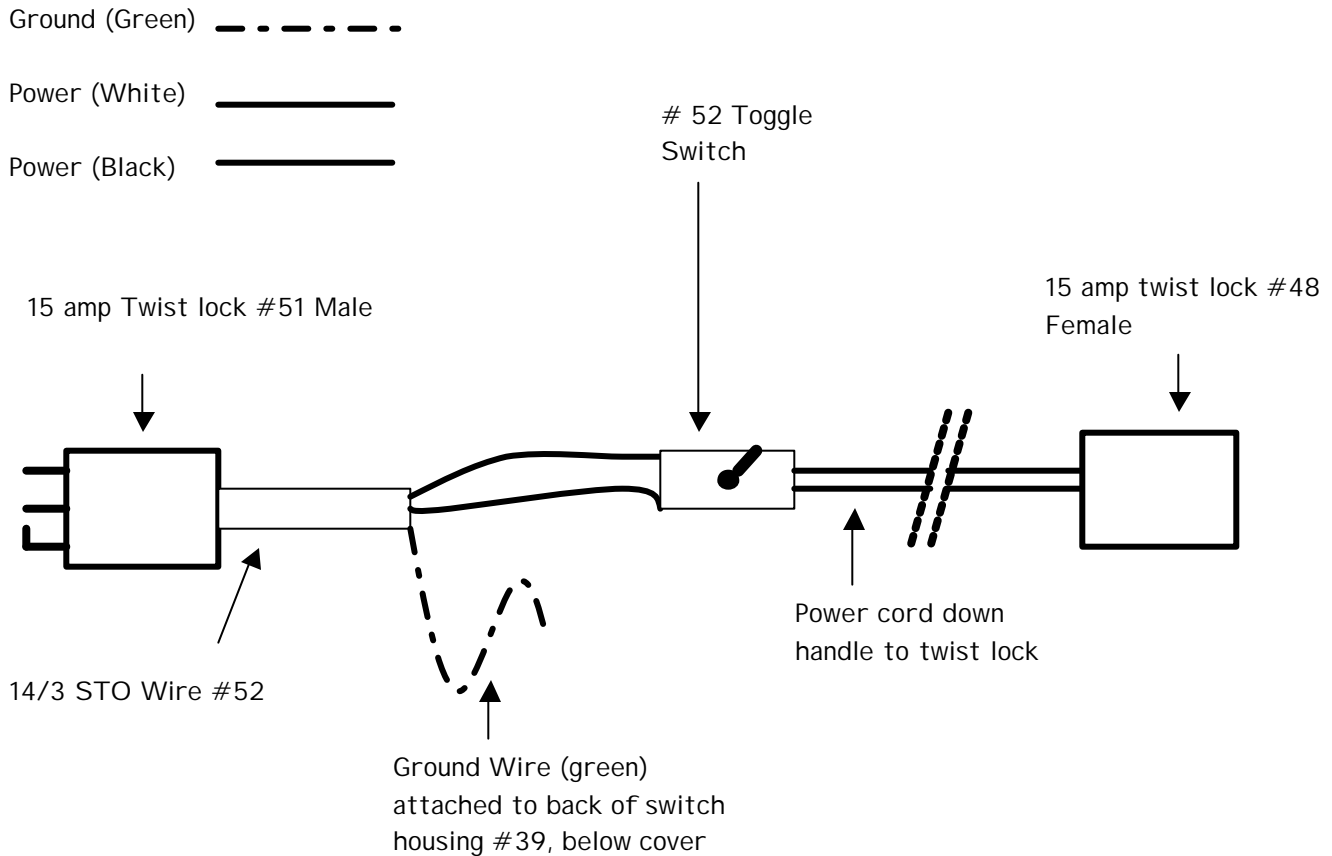

**Follow these simple maintenance steps and rent  
The World's Finest Floor Sanders  
In the Best Possible Condition!**

## Wiring Diagram SL-8 Sander

### Notes:

- Wrap entire lower portion of toggle switch and terminal connections with electrical tape.
- In the twist lock, the black wire attaches to the gold terminal
- In the twist lock, the white wire attaches to the silver terminal

## Troubleshooting your SL-8:

Problem: The SL-8 is not holding paper correctly.

Solution: Clean out cam slot for full operation!

To improve the cam action of the SL-8 drum, follow these easy instructions:

- 1) Look for sawdust built up between the cam and the aluminum end cap, opposite the pulley.
- 2) Put a piece of coarse paper (#20) on the drum. This will force the cams, pawls and springs away from the end cap.
- 3) Using a straightened paper clip and an air compressor, clean out the area between the cam and end cap. **REMOVE ALL THE BUILT UP SAWDUST!**
- 4) Remove the paper and check to see if the cam is touching the end cap.
- 5) Repeat the process if the cam is not touching the end cap.

This process should be don on a regular basis to assure 100% pressure from the cams, pawls and springs. If the cams are moving properly and there is still a problem holding paper, then it is time to recover the drum. We recommend completing a drum exchange every 2-3 years, depending on use. See page 7 for additional information on the drum.

Normal View... No Sawdust effecting cams

Cam packed with sawdust, needs to be removed

Insert 20 grit paper, move cam back so the spring pressure is not on the sawdust

Insert paperclip, blow out, remove sawdust to allow complete movement

Call us at 1 800 451-5560 to order a drum exchange. We will send a drum assembly to your location, and charge your company a core charge. Upon receipt and recovery of your drum we will issue a credit of the core charge and bill your company for the recovery fee.

## SL-8 Drum Removal & Reinstallation!

One of the advantages of your SL-8 sander is the soft rubber drum. It's more forgiving than a hard rubber surface so your customers can achieve better results and it is easy to maintain!

Essex Silver-Line Corporation suggests you change the rubber on you SL-8 drum every two to three years. The rubber wears down as the machine is rented and used.

You can remove the drum and send it to us in our Dracut, MA plant for recovery or simply call us for a drum exchange. We send a reconditioned drum to you and send yours back to us for recovery.

### Removal & Reinstallation Instructions:

- 1) Unplug the machine from power.
- 2) Remove the Pulley belt cover screw (#85)
- 3) Remove the Pulley Belt Cover (#84)
- 4) Remove the Drum Belt (#101)
- 5) Lean the machine back onto its handle. **Be careful to hold the motor** so it does not slam back into the handle. The belt that holds it forward has been removed.
- 6) Using a ¼" socket wrench remove the four (4) bolts (#83) holding the two Drum Bear Caps in place (#s 81 & 82).
- 7) Remove the Drum Bear Caps (#s 81 & 82).
- 8) Remove the drum unit.
- 9) Reinstall the refurbish or recovered drum assembly. Line up the boots with the chassis and push in the assembly.
- 10) Reinstall the Drum Bear Caps.
- 11) Reinstall the Drum Bear Cap Screws.
- 12) Lean the machine back down to its upright position, be careful of the motor again!
- 13) Reinstall the belt and adjust the belt tension using the motor adjusting screw (#88).
- 14) Level the drum and reinstall the belt cover and belt cover screw.

## Leveling/Adjusting the Cut on the SL-8

Remove the belt guard to expose the wheel level disc.

Test the cut:

Install a piece of fine paper on the drum; lower the drum onto a flat surface making a cut. The cut should be 8" across in an even fashion. If it is not, you need to loosen the nut on the axle and rotate the wheel level disc to one side. Gradually move the disc towards to the other end of the slot, testing the cut as you move the disc. Continue till you make an even 8" cut.

When the machine makes the proper cut, tighten the nut and reinstall the belt guard.

## Proper Application & Use of Silver-Line Abrasives

### **12, 16, 20\* grit Sheets & Discs**

For removing old surface coatings and leveling uneven floors

### **36, 40\* grit Sheets & Discs**

For intermediate sanding of floors following rough sanding.

For initial sanding of moderately worn floors

### **60\*, 80, 100\* grit Sheets & Discs**

For finish sanding of all floors prior to applying new coatings

For removing light scratches, sanding marks and minor surface damage

### **60, 80, 100, 120, 150 & 180 grit Sandscreens**

For removing fine scratch marks prior to applying new coatings

For light sanding between surface coatings

\*Indicates most popular rental grits for sanding floors. 60 & 100 grit should be used in succession for proper finish. Never skip more than two grits when sanding a floor.

**Example: Do not jump from 36 grit to 80 or 100 grit**

Always start your sanding project with the highest possible grit that will cut and level your floor. If the grit will not cut the finish or level the floor, go down one grit size to complete the cut!

### **White\* Thick Nylon Pads**

Buffing, for polishing floors where highest luster is desired

### **Green Thick Nylon Pads**

Scrubbing, for general duty scrubbing and spot removal on floors

### **Black Thick Nylon Pads**

Stripping, for heavy duty wet stripping of floors

*\* White pads should be used under the padlocks when using sandscreens on rotary and orbital polishers. They are used for driving sandpaper on Orbital Polishers.*

## Wood Floor Refinishing *The Silver-Line Way*

(Visit our website [www.essex-silver-line.com](http://www.essex-silver-line.com) under consumer tips for complete information)

### Job Preparation:

Remove the furniture, wall hangings, etc. Clear the room out!  
Remove the old carpet, carpet pad and carpet strip (where necessary)  
Locate & Reserve *only* Silver-Line Sanders & Edgers from your local rental store  
Watch the Silver-Line "How to" Video

Inspect the floor for and remove...  
Staples from the carpet pad  
Nails from the tackstrip  
Nails protruding from the floor (countersink these nails)

***Make sure you are very diligent when completing this task, protect the rental machine!  
You may be liable for damage to the drum and disc pad on the rental equipment!***

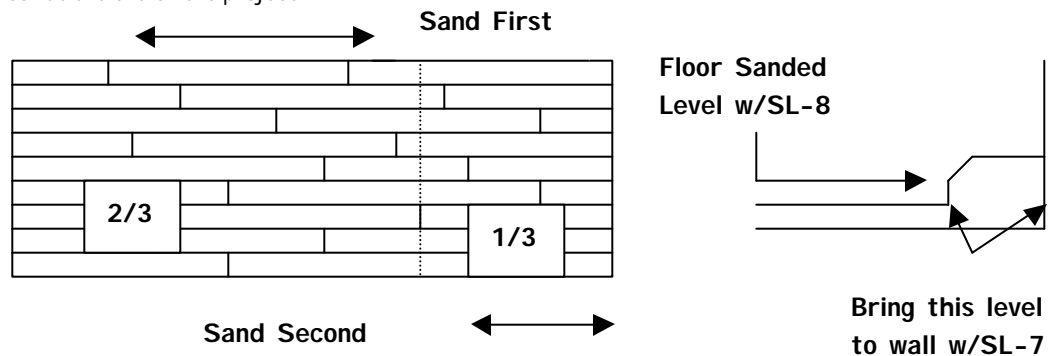

Protect the rest of your house from sawdust, sweep the floor and vacuum, and pick up the equipment!

### Sanding the Floor:

What are you trying to accomplish during this project? First, you want to level the floor, and remove the old finish. The remaining cuts or passes are to remove the scratch marks made by the previous cuts. Do not skip too many grits when sanding the floor, as the finer grits may not be able to remove the heavier scratches.

Start the process with the highest grit possible to complete the first cut, leveling and removing the finish. If a 36 or 40 grit will accomplish the task, then do not use 20 grit or heavier. If it seems to be taking too long, drop down and use the heavier grit. By doing this you will probably save time.

Break the room down into two sections, 1/3 to 2/3 and sand the larger area first. Complete the 2/3 section and turn around to sand the remaining 1/3. *Do this with all the grits.* Offset where you stop and start the sanding so you do not end up with a line across your floor at the end of the project.

Use the SL-8 sander for the main section of the floor and then follow with the SL-7 edger. This method will allow you to set the level you want in the main section of the floor and then bring it out to the edge of the room with the SL-7.

To use the Silver-Line SL-8 correctly, you sand forward and backward on the same line with the SL-8 sander. Be sure to lift up on the handle with enough force to keep the drum pressure constant on the floor. Feather the sander so the drum comes off the floor while moving forward or backward when you reach an area that you need to stop.

The following grits are recommended for a professional looking sanding job. Again, you want to start with the least aggressive grit to complete the leveling and finish removal and proceed up through the grits.

**20, 36 or 40, 60 and finally 100**

## Installation of paper on the Silver-Line SL-8 Floor Sander

Turn off the sander & unplug from outlet

Bend the Silver-Line SL-8 sheet in the paper bender located on the drum cover (pictured)

Tilt the SL-8 back onto the handle and lift the drum cover for easy installation

Roll the drum until the paper slot is facing you and adjust the cams so the arrows printed on the cams are facing you. The left arrow should point down, while the right arrow points up.

Insert one end of the paper into the slot (pictured) and turn the drum around so that the paper wraps around the drum. Insert the other end into the slot and push both ends into the slot until the paper is snug on the drum.

*When using 20 grit or coarser paper, insert the top of the sheet first and then install the bottom half, it will insert easier.*

Using a 7/16" open wrench turn the left cam down ¼ turn, then turn the right cam up ¼ turn (pictured). As you turn the second cam you will see the paper pull tight into the drum. **You must turn both cams a full ¼ turn to secure the paper.**

Turning the cams more than the ¼ turn will not make the paper any tighter on the drum, ¼ turn on each cam is all you need to attach the sheet. Turning the cams too much can cause the cams to come completely around and loosen the paper.

Lower the drum cover and return the sander to its upright position resting on the rear of the chassis.

Plug the machine into an outlet, turn it on and slowly lower the drum to the surface being sanded as you walk forward. Lift the drum off the floor as you reach the end of the room, walk backwards on the same path and lower the drum to sand the floor as you return to the other end of the room. ***Sand in both directions with the Silver-Line SL-8 floor sander!***

To remove used paper, reverse the process.

For very coarse paper, (12 & 16 grit) it may be necessary to remove grit to insert the paper into the slot. First, bend the paper as instructed. Second, put on safety glasses and remove the grit by placing the paper on a hard surface (grit up) and hammering the grit off the flaps until manageable. Continue installation of the paper.

**Note:** If you trip a breaker or blow fuse, turn off the equipment off, then reset the breaker or replace the fuse.

**Note:** Remove all sawdust from the house as you empty the dust bags. Empty your sander bags when they are ½ full, this will help with the dust pick up. Sawdust can be flammable and you do not want it in your house.

**Note:** When using the SL-7 edger, sand from right to left and let the edger do the work. A properly aligned edger, with a disc pad in good condition will function well without the user exerting additional pressure. Let the edger do the work; don't put extra pressure on the machine. Work at a pace you are comfortable with, and take frequent rests.

If the cutting action of you sander seems to slow or diminish, it is probably time to change the sandpaper. In an effort to save money, don't try to extend the life of the paper, replace it as needed. If you skimp on the amount of paper you use on this project it will affect the end result. Don't look at the cost at the time of sanding, but rather over the life of the floor. Replace abrasives to get the same type of cut across the floor.

After you sand the floor with the SL-8 & SL-7 it is time to scrape corners, door jambs, etc. Use our 12 wood handle scraper with a 1" Red Devil blade, available from the rental store, to accomplish this task. Hand sand the areas you scraped.

If you have areas such as baseboard heat, radiators or toekicks that could not be reached by the SL-7, use the Silver-Line U2 underradiator sander to clean up these areas. It uses 5" PSA discs and is also available at the rental store.

When your done sanding your floor return your sanders to the rental store. Remember to return the cords, wrenches, bags and unused supplies.

**Note:** After sanding you should screen the floor before you apply any finish or stain to achieve the best possible finish. A professional floor sander will screen his work; spend the time and money to screen your floor.
